DISPOSABLE ADDONS REPOSITORY INFORMATION

Latest versions of all Disposable addons can be found at GitHub, links are provided below;

- **Disposable Theme (Freeware, public access)**

  Main Repository   : https://github.com/FatihKoz/DisposableTheme
  Latest Release   : https://github.com/FatihKoz/DisposableTheme/releases/latest
  All Releases   : https://github.com/FatihKoz/DisposableTheme/releases

- **Disposable Basic (Freeware, public access)**

  Main Repository   : https://github.com/FatihKoz/DisposableBasic
  Latest Release   : https://github.com/FatihKoz/DisposableBasic/releases/latest
  All Releases   : https://github.com/FatihKoz/DisposableBasic/releases

- **Disposable Special (Freeware, public access)**

  Main Repository   : https://github.com/FatihKoz/DisposableSpecial
  Latest Release   : https://github.com/FatihKoz/DisposableSpecial/releases/latest
  All Releases   : https://github.com/FatihKoz/DisposableSpecial/releases

All repositories provide extensive readme files and in some cases wiki style pages to provide additional info / tricks to VA admins or webmasters.

Always use latest released zip files, do NOT download the source code, or do NOT download files from main repository page (resulting a zip file named like DisposableBasic-main.zip, which is the source code and not compatible with v7 install).

Whenever required use blade duplication procedure to have your own customized page designs, do NOT alter module files directly, as this will make updates harder for you and may cause problems.

None of the Disposable addons are mandatory, and they do not require each other to work, and no other developer should force someone to install any Disposable addons for a theme or tool to work properly. phpVMS v7 provides enough features to check an addon's existence and provide support / use its features accordingly if it is installed and enabled. So, if this happens and a developer forces you to install my addons, please kindly inform them to update their addons to provide required checks.

phpVMS v7 itself is enough to run and manage a Virtual Airline, my addons are here to provide some extra features only (which are mainly stuff I wanted to have in my setup and some were requested by fellow VA Admins), a different theme with more customization options, new bootstrap features and icons to follow recent development changes etc.

All my addons do have a license and in all cases license conditions apply, something being public and free does not mean it can be used, duplicated, edited, redistributed etc. without following license terms.

Good luck and enjoy your hobby,

Fatih (aka Disposable Hero, Dispo)
